Nithin S

AI / LLM Engineer · Agentic AI · Machine Learning · Data Scientist

Coimbatore, India · +91 9025149983 · nithinsofficial86@gmail.com · linkedin.com/in/nithin-s-52292b278 · github.com/nithinskumar866 · portfolio-nithin.pages.dev

Professional Summary

B.Tech AI & Data Science graduate (2026) with hands-on industry experience building production LLM and agentic AI systems. Worked on fine-tuning (LoRA), distillation and quantisation of LLMs, and built RAG and agentic RAG pipelines with LangChain and LangGraph for a live product. Experienced with agent frameworks (LangGraph, OpenClaw, Mastra AI), LLM-based extraction and classification, and evaluation of model and agent outputs. Strong Python and ML foundation, with a track record of owning problems end to end and documenting design decisions clearly.

Technical Skills

- **Languages:** Python, SQL, JavaScript, Java
- **LLM Engineering:** Fine-tuning (LoRA, PEFT), Knowledge Distillation, Quantisation, Prompt Engineering, LLM Evaluation, Synthetic Data Generation, Hugging Face Transformers
- **Agentic AI & RAG:** LangChain, LangGraph, Agentic RAG, OpenClaw, Mastra AI, Vector Databases, Context Management, Agent Memory, Tool Calling
- **Machine Learning / NLP:** scikit-learn, spaCy, Supervised & Unsupervised Learning, Classification, Regression, Clustering, Dimensionality Reduction, Hyperparameter Tuning, Feature Selection
- **Backend & Web:** Django, REST APIs, Firebase, Vue.js, Bootstrap
- **Tools & Data:** Git, Power BI, Figma (UI/UX)

Work Experience

AI Application Developer Intern — Techwaukee India Pvt. Ltd., Coimbatore, India · Jul 2026 – Oct 2026

- Owned the LLM workstream of a live AI-powered recruitment product, working on production systems alongside the core engineering team.
- Fine-tuned LLMs for product-specific tasks using LoRA/PEFT, and applied knowledge distillation and quantisation to reduce model size and inference cost while preserving accuracy.
- Built and managed RAG pipelines (chunking, embedding, vector store, retrieval) and designed an agentic RAG approach using LangChain and LangGraph that plans retrieval steps, calls tools and self-checks answers.
- Developed LLM-based extraction and classification components over unstructured documents, with prompt and model iterations driven by evaluation results.
- Wrote evaluation harnesses to measure retrieval quality, answer accuracy and agent reasoning, and generated synthetic test data to cover edge cases.
- Documented model choices, agent behaviour, evaluation results and design decisions for the team; tracked recent agentic AI research (context management, long-term memory) and applied relevant techniques.

Blockchain Intern — VOIS (Vodafone Idea Foundation), Remote · Jan 2025 – Mar 2025

- Designed and implemented Solidity-based smart contracts to automate land registration, ensuring immutability and fraud prevention.
- Developed and deployed a decentralised land registry system on Ethereum, improving security and transparency of property transactions.

AI Intern — CodeClause, Remote · Jan 2025 – Feb 2025

- Built an NLP-driven system to analyse CVs and predict personality traits (e.g., conscientiousness, openness) with 93% accuracy using spaCy and scikit-learn.

Intern — Rius Technology, Bangalore, India · Aug 2023 – Oct 2023

- Developed a machine learning model to predict depression rates in married couples, achieving 98% accuracy.

Projects

AI Students Homework Comparison (LangChain)

- Designed and implemented an AI-powered system that checks tutors′ notes and analyses textbook content for the day′s lesson.

- Automatically generates homework and creates customised question patterns through structured prompting based on user requirements.

15 Machine Learning Models

- Built supervised and unsupervised models (classification, regression, clustering, dimensionality reduction) for predictive tasks across multiple datasets.
- Improved model efficiency and accuracy through hyperparameter tuning, feature selection and dimensionality reduction.

Machine Learning Model for Predicting Depression in Married Couples

- Developed a machine learning model that achieved 99% accuracy in predicting couples' depression rates post-marriage.

INVESTO — Investor-Entrepreneur Matching Platform (Django)

- Developed a fully functional Django application that matches investors and entrepreneurs based on shared interests.
- Integrated a real-time messaging system so matched users can communicate within the platform.

Linkbery — Unified Course Platform (JavaScript & Firebase)

- Web-scraped courses from major sources (Coursera, Udemy, Scrimba) into a single platform, reducing search time.
- Used the Firebase API to serve data dynamically to the frontend and display course details category-wise.

Portfolio Website (Vue.js & Django)

- Built a fully functional portfolio website with a Vue.js frontend and Django backend, including user authentication and project management.

Education

B.Tech. in Artificial Intelligence & Data Science — Rathinam Technical Campus, Coimbatore, India · Nov 2022 – May 2026

Certifications

- IBM AI Engineering (Professional) — Coursera
- Zero to Hero in LangChain: Build GenAI Apps using LangChain — Udemy

- Professional Data Scientist, Power BI — DataCamp
- Associate Data Scientist and Data Scientist — DataCamp
- Python & Django: The Complete Web Development Course — Udemy
- Complete JavaScript & React Core — Udemy
- Java DSA Course: Mastering the Fundamentals and Beyond
